

# KORONA STUDIO

## Intro

KORONA POS is committed to designing the most intuitive and powerful point of sale system on the market. We strive to consistently update our software with the latest technologies, integrations, and security. Most of all, we aim to respond to the demands and concerns of our clients so that we can continue to improve and fine-tune our product.

This document highlights our most useful and popular features. It also serves as an introduction to our recently updated KORONA Studio back office and the new tools and features we are proud to announce are now offered to all of our users.

## Getting Started/Onboarding

Getting started with KORONA Studio has never been easier. Below are the steps to follow to get your trial or live account up and running.

### Signing In

Just like signing into any website, you can access KORONA Studio from anywhere with an internet connection. Simply go to [www.koronacloud.com/web/login](http://www.koronacloud.com/web/login) and enter your credentials.

Once signed in, you can access all of the features of the back office KORONA Studio.

### Support Info And Contact

**Email:** [support@koronapos.com](mailto:support@koronapos.com)

**Phone:** 833.200.0213

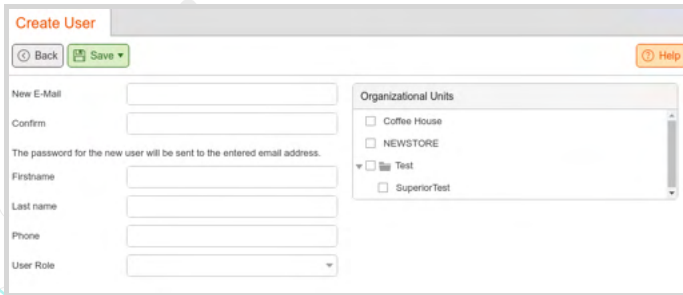

**Active Remote Support:** KORONA POS also provides a button so that our support team can access your POS terminal remotely. From there, we can show you certain procedures and help troubleshoot and resolve problems. You'll be given the option to activate this support by touching or clicking the KORONA POS logo in the top left corner of your POS.

### Onboarding Employees

Onboarding your staff is easy and intuitive with our **Create Cashiers & Users** page. Retailers can taper access and permission levels to fully customize employee profiles so that your cash, discount abilities, and customer information are protected.

There are two main options when it comes to profiles. **Cashiers** are employees who are limited to the basics of checking customers out. **Users** have access to the Studio interface. Each role, though, can add or subtract custom permissions by user.

Each sign-in profile will be assigned a code. This code can be used to program login cards so that you can easily swipe into the system.

## Uploading Products

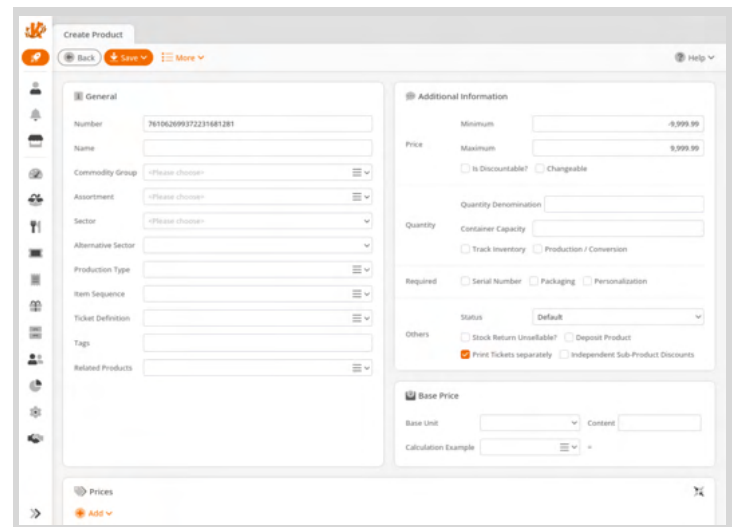

KORONA Studio allows you to choose from several options when uploading new inventory. You can manually add products on the **Create Products** page, or you can choose to import a CSV or Excel file through the **Data Exchange** page.

### Create Products

To create new products you will be asked to fill out the mandatory fields:

1. Naming the product
2. Selecting a commodity group
3. Choosing a sector (tax category)

From there, you can add more information like prices, supplier information, tag numbers, cross-selling suggestions, and more.

**Create Product**

While this option is a bit more hands-on, you can still mass-edit your product list with advanced filtering features. You also have the option of copying lists of current products so that you can add similar items without having to rewrite all of the same information.

## Data Exchange

The other option that retailers have is importing a spreadsheet with product information. On the **Data Exchange** page, you can choose whether you are importing an Excel or CSV document. From there, you can click **“Run Import,”** and your supply list will auto-populate with the incoming data.

If you need any kind of assistance with this, don’t hesitate to reach out to our technical support team at [imports@koronapos.com](mailto:imports@koronapos.com).

## Categorizing Products

Putting products into categories organizes inventory and enables more efficient searching. Sorting features are especially useful for retailers with large product lists.

KORONA Studio allows you to categorize products with commodity groups, assortments, sectors, and tags.

- **Commodity Groups** – Optimize features like running reports, creating promotions, button layouts, ordering products, and more. Commodity groups can be nested inside of one another to build a neat product hierarchy.

For example, a convenience store owner can put bananas inside a “fruit” commodity group. Then they can place that “fruit” commodity group in a different, broader commodity group called “produce.”

- **Assortments** – Categorize items by availability and relevance. For instance, you can create assortments for seasonal items like Christmas gifts or summer-specific products. You can also sort products for individual store locations or regions.

## Hardware

All hardware purchased through KORONA POS comes preconfigured with the software run on a proprietary Linux system. Retailers can simply plug in their device, sign into their account, and immediately access their KORONA POS and Studio software. Studio can also be accessed from any device with an internet connection.

Every business has different hardware needs, and there is a wide range of prices for POS hardware and accessories. Contact us to get a hardware quote for terminals, barcode scanners, inventory scanners, receipt printers, tablets, and more.

## Our Most Commonly Used Features

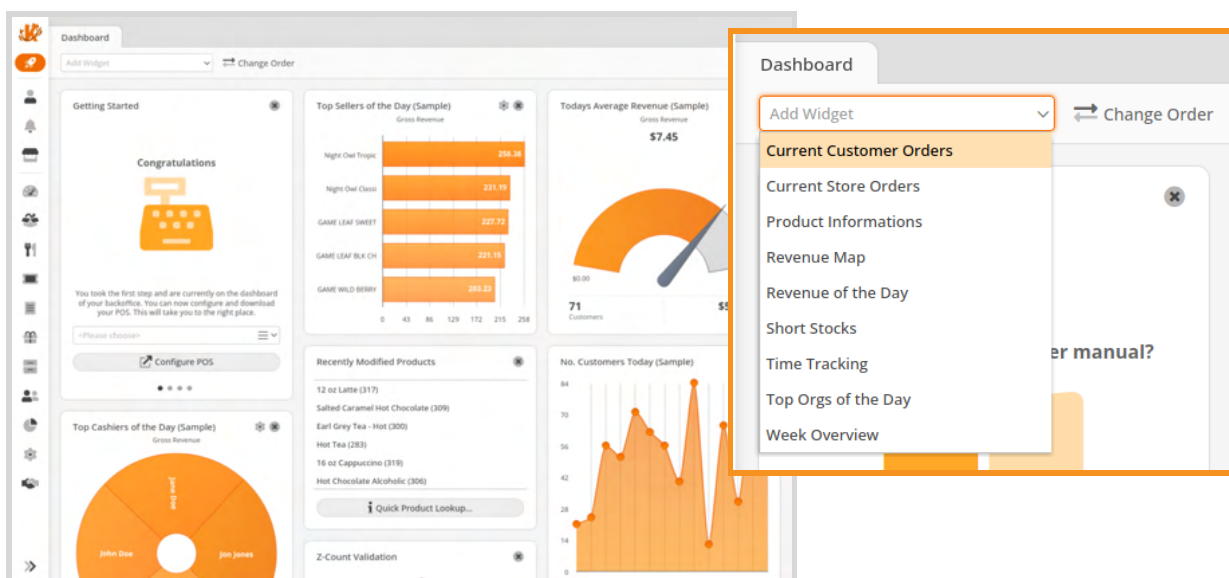

KORONA Studio comes with dozens of standard and advanced features. No business needs all of them, and some businesses need more than others. This section covers a few of the features that almost all of our clients use at their operation.

### Customizable Dashboard

Your KORONA Studio dashboard gives you a direct and summarized view of all of your point of sale data. The best part about our dashboard is that it is fully customizable, making it convenient to reference your most commonly used reports and KPIs.

You can choose from an array of widgets to add to your dashboard screen. Below are a few of the most popular:

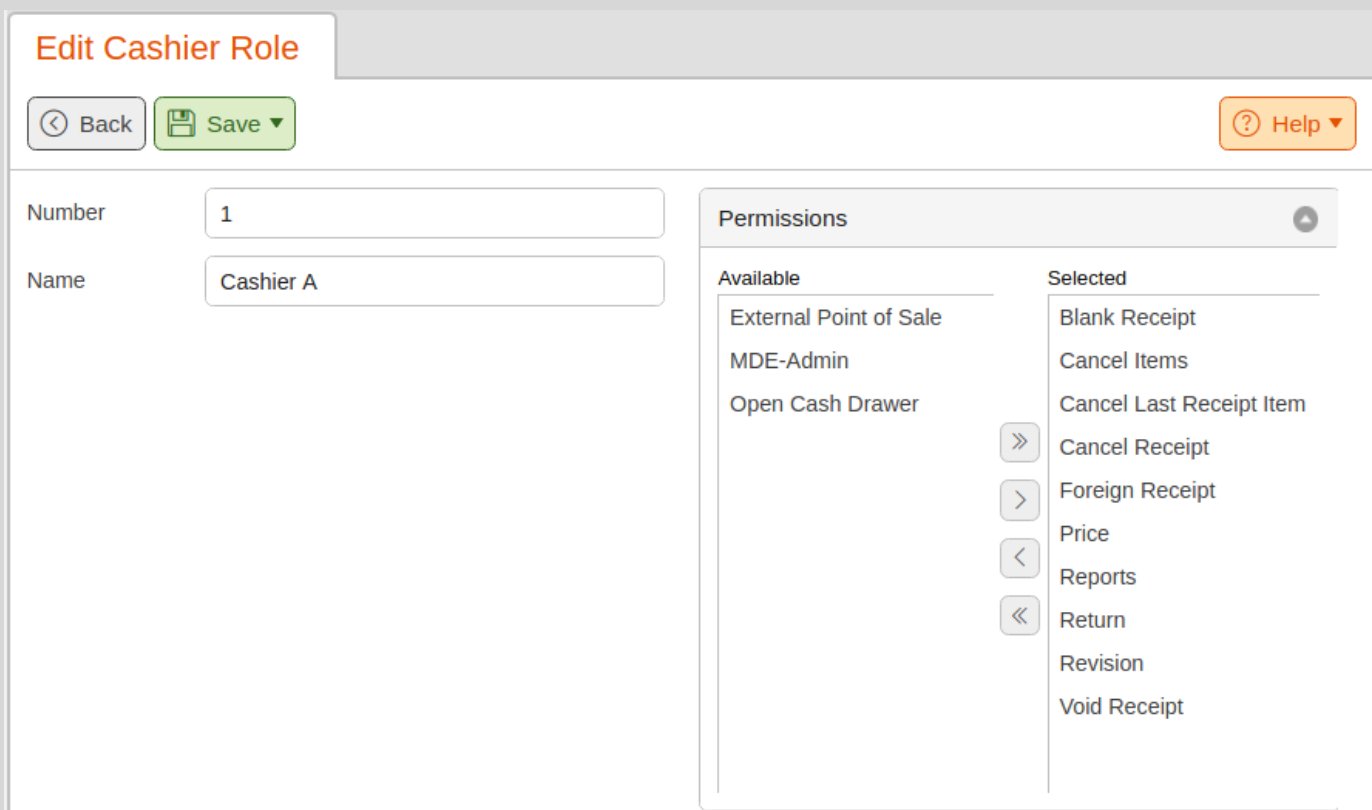

- **Today's Average Revenue Sample** – This refers to a meter that shows how your average check amount sizes up to your target receipt per transaction.
- **Current Customer Orders** – See all of your customer orders for the current work day.
- **Employee Time Tracking** – Get a quick view of the start and end times for all of your employees from that work day.
- **Discontinued Products** – See if any items have been sold out. This button is also clickable, sending you to a prompt to reorder these products.
- **Number of Customers Today** – This will show up as a line graph showing the number of customers that you served per hour.
- **POS Balance** – See displays of POS balance for the current sales of any given day.

## Manage Cashier Roles And Permissions

KORONA Studio allows retailers to personalize which actions are allowed by each employee. You can permit or restrict actions like receipt cancellation, processing returns, price override, and more.

Many retail businesses employ managerial staff alongside store associates and cashiers. With KORONA POS permissions, you can strike a balance between equipping your staff with the necessary tools for your checkout flow while also reducing unauthorized discounts and opportunities for internal theft.

**Edit Cashier Role**

## Extensive Inventory Management Functions

At KORONA POS, we pride ourselves in offering the best inventory management tools in the retail point of sale industry. The software is designed to help businesses with large inventories, from single-location operations to national chains and franchises. Here are some of our most useful inventory management features.

- **Reorder Widget** – Set reorder levels so that your system automatically reorders more stock when you reach a certain threshold. This takes away the stress of running out of stock and having to manually order your most popular items.
- **Supplier Management** – Set up a profile for your suppliers in order to neatly keep track of each of them you need about them. This includes delivery instructions, pricing, payment preferences, contact info, and more.
- **Franchise Inventory Management** – Get advanced internal ordering options for franchisees so they can order directly from the franchisor. Set up your royalty rates and calculations so that all of your franchisee relations are neat, organized, and accurate.
- **Live Inventory Counts** – Check your stock in KORONA Studio while the store is open and selling products. All of this is updated in real time so you always know exactly how much inventory you have of each product.
- **Automated Report Dispatch** – Setting up a warehouse report to be emailed to you every month lets you keep track of historical inventory levels.

The screenshot displays two overlapping software screens. The top screen is titled 'Edit Franchisee' and contains the following fields:

- Number: 1
- Name: Mariz's world

## Organization Report

KORONA Studio provides detailed reports for organizational units, meaning individual stores. First, elect which store you want to assess. Then, choose the desired date range. After running the report, you will have all of the most vital data points at your fingertips.

These include figures for revenue, taxes, discounts, expenses, payment methods, and more. In addition, operators can export organization reports as PDFs or Excel files for easy and efficient record keeping.

## Promotion Wizard

This feature aids in making promos and discounts exceptionally easy. When creating a promotion, KORONA Studio will prompt you with a set of customization parameters.

For example, these options will allow you to choose the time of day, specific customer, location, or product. Next, you will be prompted with options to change pricing based on percentage, fixed pricing, or a flat reduction. The **Promotion Wizard** helps retailers quickly complete discounts without missing any of the criteria that are required for the promotion to function within the POS properly.

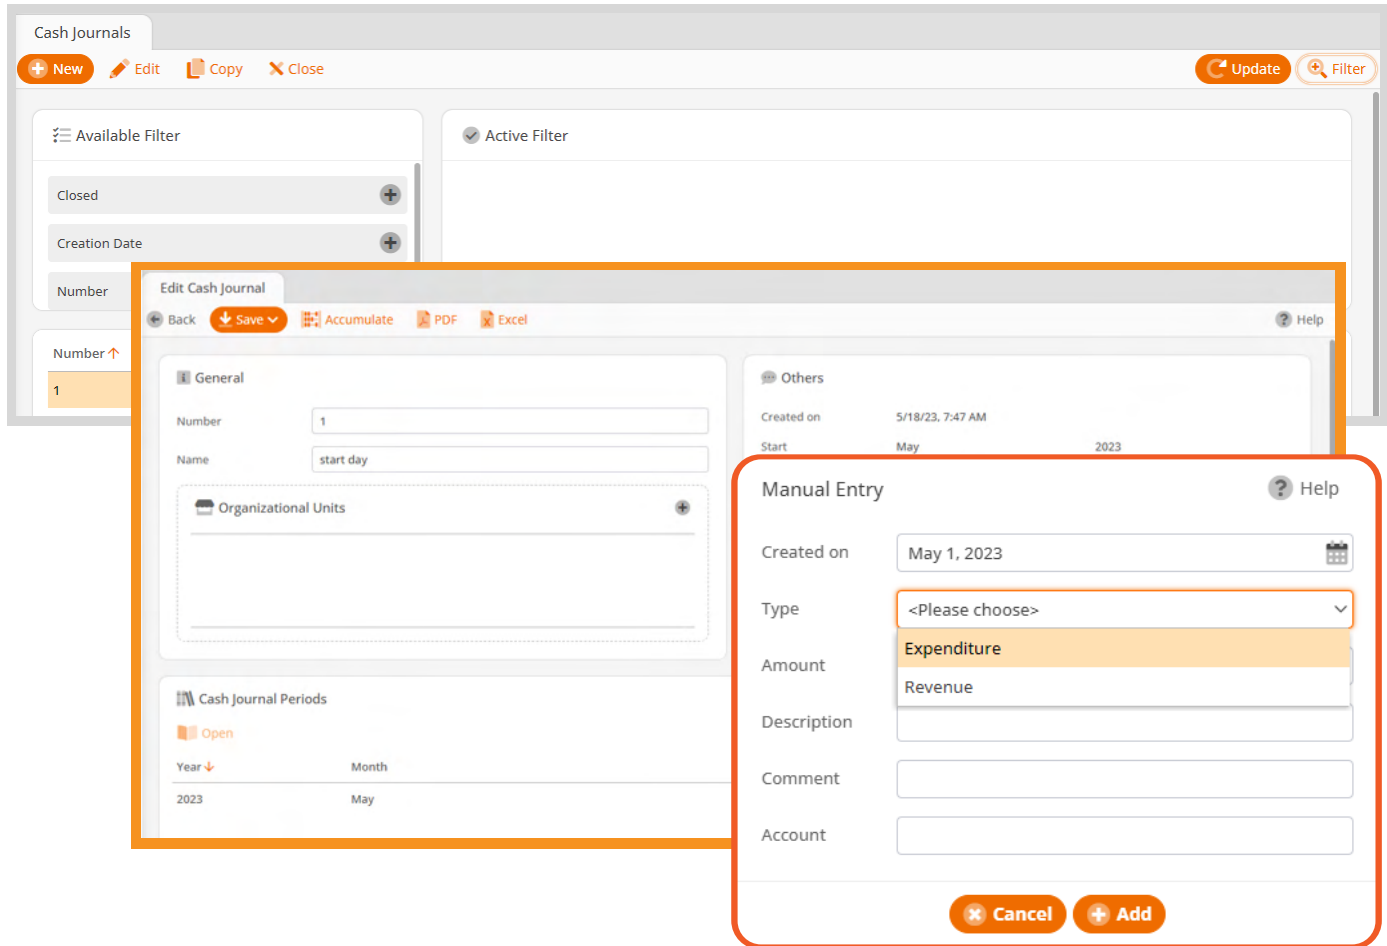

The image shows a screenshot of the 'Create Couponing Promotion' wizard interface. The main window is titled 'Create Couponing Promotion' and includes a 'Wizard' button highlighted with a red box. Below the main window, four callout boxes illustrate the wizard's steps:

- Step 1 of 4: Basic Conditions** - 'What are the basic conditions that must be met before the coupon promotion can become active?' This step offers options: Date, Weekday, Calendar Day, Time of Day, Organizational Unit, Total Product Quantity, Customer, Customer Group, and External Coupon Number.
- Step 2 of 4: Product Selection** - 'What must be present for a discount?' This step offers options: Products with Tag, Specific Product, Product from Commodity Group, and Total Receipt Amount.
- Step 3 of 4: Discount** - 'Which sort of discount should be applied?' This step offers options: Price Reduction, %-Discount, and Fixed Price.
- Step 4 of 4: Overview** - This step provides a summary of the configuration, including Basic Conditions, Product Selection, and Discount details, along with an 'Advanced' section for additional settings.

## Cash Journal

Protecting cash is a major concern for many retail businesses. Fortunately, with KORONA POS and KORONA Studio's **Cash Journal**, managing cash flow is easy. Enter any expenditures or cash sales and the system automatically calculates your balance for you throughout the day.

The screenshot displays the KORONA POS Cash Journal interface. At the top, there are tabs for 'Cash Journals' and 'Manual Entry'. The 'Cash Journals' tab is active, showing a list of journals with columns for 'Number', 'Creation Date', and 'Status'. A 'Manual Entry' dialog box is open, allowing users to add a new entry. The dialog box has a 'Type' dropdown menu with 'Expenditure' selected. Below the dialog box, there is a table for 'Cash Journal Periods'.

Year	Month
2023	May

## Plus Package Advanced Tools

KORONA POS pricing is a simple tiered system. The Plus package is meant for retailers who need more advanced inventory management, often for multiple locations. This section offers a glimpse of some of the most commonly used features within the Plus package.

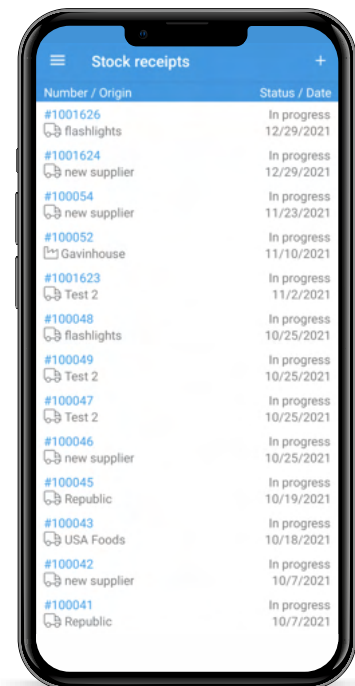

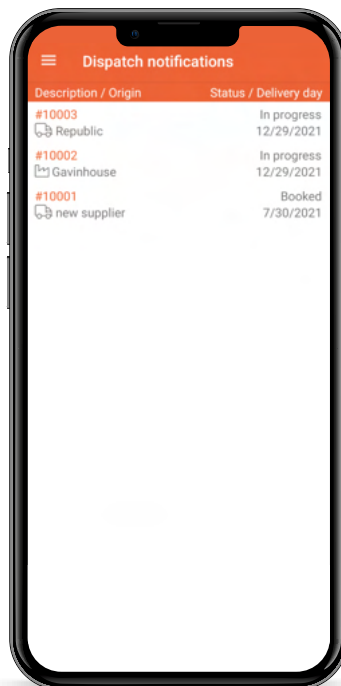

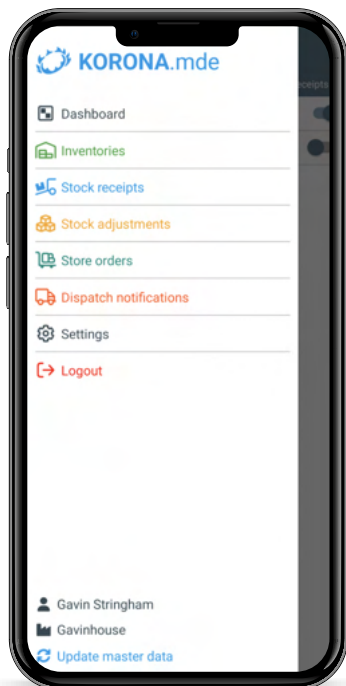

## Handheld Inventory App

Our smartphone app gives retail operators remote access to their inventory lists. It's essentially a mobile extension of your KORONA Studio inventory section. There you can use your smartphone to make edits in your inventory system.

Whether you're looking over your stock in a warehouse or monitoring your inventory from off-site, you can easily make any changes to your inventory or pull up product information on our handheld inventory app. Your app syncs up seamlessly to your cloud system.

With this feature, you can carry out these functions from your smartphone:

- **Inventory Lists Adjustment** - Upload or alter inventory counts into your cloud account. Create inventory lists for new products or update existing inventory counts to reflect more accurate or up-to-date information.
- **Access Your Store Receipts** - View and confirm any received items from specific suppliers. You can also use this function to send a stock order to another warehouse.
- **Scan a Product** - Get specific information about a product just by scanning it with your phone. You can retrieve data, such as product name, stock level, commodity group, codes, suppliers, and more.

## Multi-Store Management from a Single Back-Office

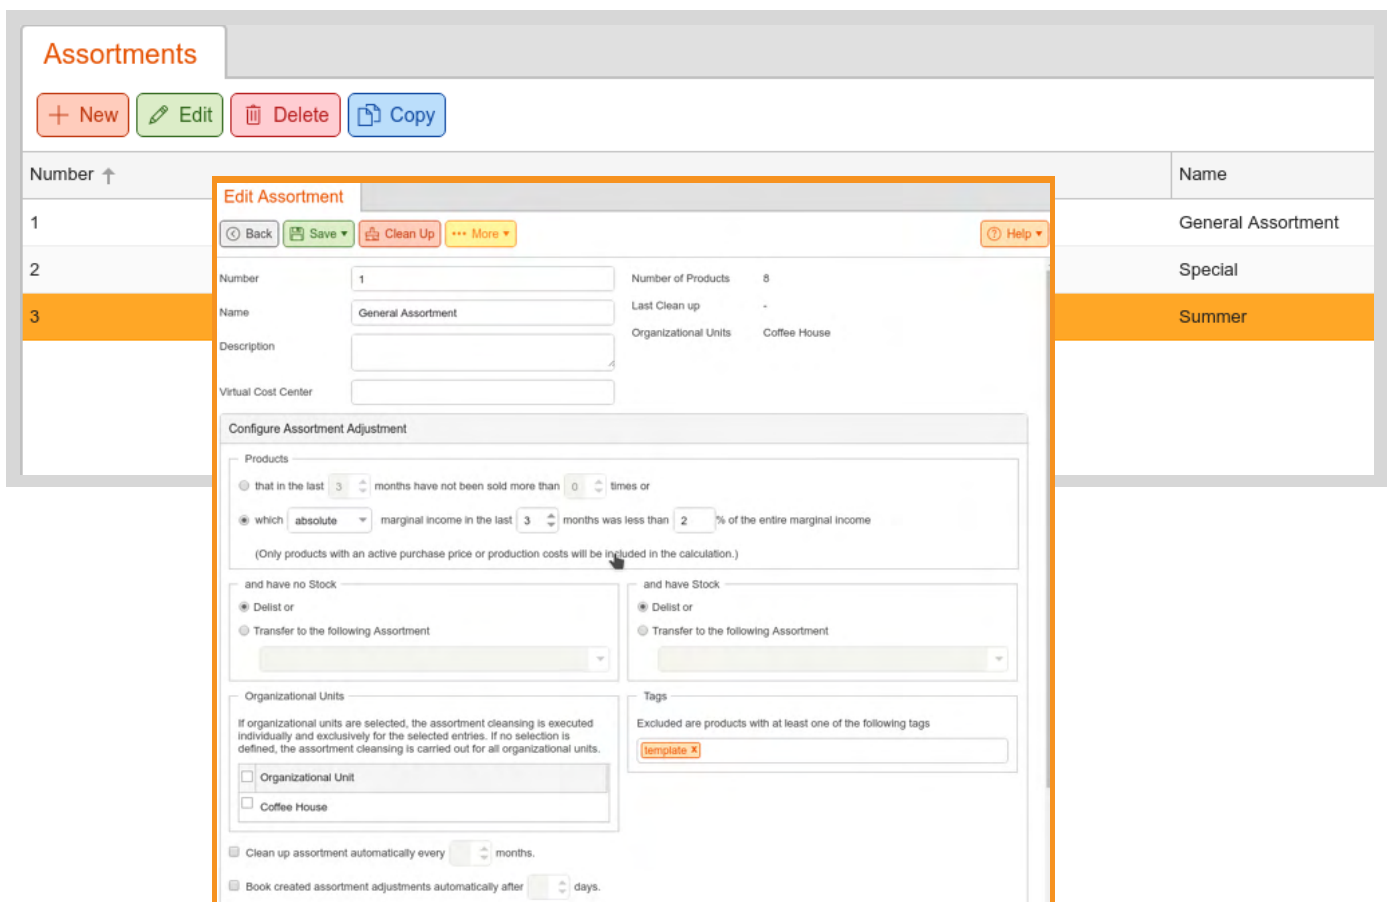

The KORONA POS cloud software is built for an expanding business. You can access all of your multi-location data with a single back-office interface.

Seamlessly transfer product inventory information from one store to another. Add promotions across multiple stores or regions from one centralized screen. KORONA Studio equips retailers with the tools to organize and monitor multi-location businesses from one place.

## Assortment Cleanup

Dealing with a large amount of rotating inventory can be a huge task for business operators. Assortment cleanup is a feature that helps retailers organize and hide seasonal or unsold products.

By creating assortments and applying filters, businesses can prevent these products from showing up in order recommendations until they are ready to sell them. This tool helps retailers avoid wasting time dealing with items that are not ready to sell or are otherwise temporarily irrelevant.

The screenshot displays the 'Assortments' management interface. At the top, there are buttons for '+ New', 'Edit', 'Delete', and 'Copy'. Below this is a table with columns for 'Number' and 'Name'. The table contains three rows: '1 General Assortment', '2 Special', and '3 Summer'. The '3 Summer' row is highlighted in orange. An 'Edit Assortment' modal window is open over the table, showing the details for the selected assortment. The modal includes fields for 'Number' (1), 'Name' (General Assortment), 'Description', and 'Virtual Cost Center'. It also displays 'Number of Products' (8), 'Last Clean up' (-), and 'Organizational Units' (Coffee House). Below these fields is a 'Configure Assortment Adjustment' section with various filters and options:

- Products:**
  - that in the last 3 months have not been sold more than 0 times or
  - which absolute marginal income in the last 3 months was less than 2 % of the entire marginal income
  - (Only products with an active purchase price or production costs will be included in the calculation.)
- and have no Stock:**
  - Delist or
  - Transfer to the following Assortment
- and have Stock:**
  - Delist or
  - Transfer to the following Assortment
- Organizational Units:**
  - If organizational units are selected, the assortment cleansing is executed individually and exclusively for the selected entries. If no selection is defined, the assortment cleansing is carried out for all organizational units.
  - Organizational Unit
  - Coffee House
- Tags:**
  - Excluded are products with at least one of the following tags
  - template x
- Clean up assortment automatically every 1 months.
- Book created assortment adjustments automatically after 1 days.

## Order Level Optimization

This feature uses in-depth sales analyses across a given date range to predict what your optimal order levels are for each individual product that you desire. In KORONA Studio, you can select the date range that makes the most sense, and then click the **“Optimize Order Levels”** button to automatically populate your ideal stock level numbers. Never run out of the products you need to keep your customers favorite items in stock.

### Roemello:

I appreciate the functionality of the **"Show products with tag"** option. It allows the automatic addition of products to the POS by simply applying a tag. It's a straightforward and user-friendly feature.

I also like how **the color of KORONA POS is customizable**. I find this feature particularly appealing because it adds a touch of individuality to each POS system.

**Nicholas:**

Whether it's a vineyard, quick service restaurant, shoe store, liquor store, etc, we can scale to basically any size business and any type with our **modular packages**.

Also, the control we give individual users over their system is remarkably extensive. Customers can solve just about any problem on their own since all the system settings are **stored within the cloud**.

**Philip:**

**QuickBooks Online integration** is one of my favorite features. It saves users so much time for producing product and tracking reports.

**I love the APIv3 documentation too.** It's straightforward to integrate KORONA POS to other software, allowing businesses to further customize the solution. It's clean and well-organized.

**Michael:**

My favorite feature is definitely the **open API**. Our API page is excellent and lets you run queries and live update accounts directly from our APIv3 manual page. It's a pretty powerful tool. You can integrate two services just by using what we provide on this page.

The **Price Embedded Barcode Scanning / Number Ranges** feature is great as well. The fact that we can use existing deli scale's that customers already have, take that information to match it up in KORONA POS, and read those barcodes for easy input of product prices/weight calculation is awesome.

**Joe:**

I like the ability to pick any **number range** and assign any of our functions to it. This allows you to pick a range, print out a barcode for that range, and when that barcode is scanned (like on a manager badge for example) that action is performed.

If you buy a POS device from us, it's run on Linux software that **turns on immediately** and is ready to be used. It doesn't take 15 or 20 minutes running updates or require any technical actions. Plus, you won't run into any problems if someone accidentally powers it down. Your POS can always be turned on and ready to use within seconds.

**Garrett:**

I really like the sheer variety of options available for different business models. KORONA POS has **incredible flexibility for all verticals** in the retail world, whether you run an amusement park, a tiny convenience store, or a winery.

As for **inventory management**, KORONA POS has several excellent features for managing your products and keeping control of expenses. Automation comes to mind here. For example, we have widgets that optimize stock levels to keep an appropriate number of your most popular products in-house without having to manually monitor them.

**Andy:**

With KORONA POS, mass editing is super easy and fast. For example, you can **mass update** set prices with one simple alteration. You can also do this for **filtering products**. All of this makes making changes to your inventory that much more efficient and less labor-intensive.

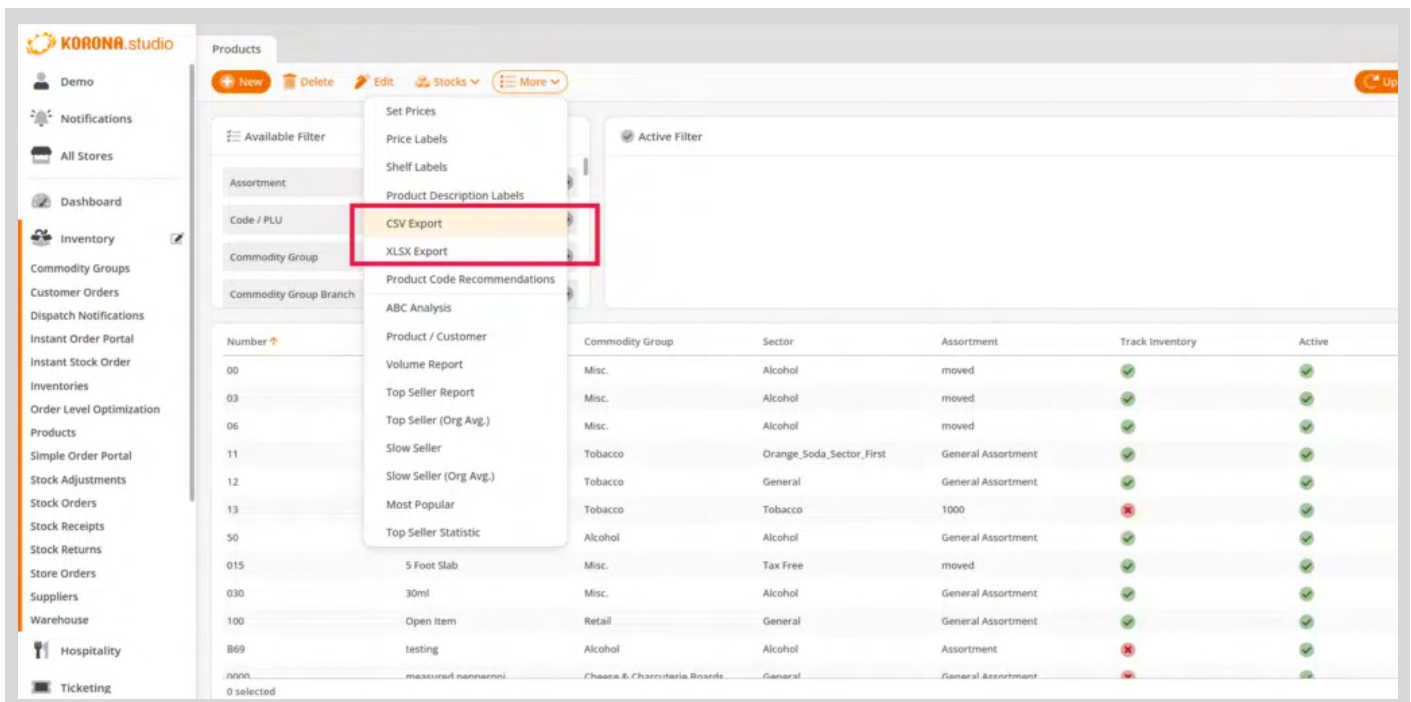

## Some New Features

KORONA Studio is always evolving. KORONA POS releases new versions of the software every quarter, and each user enjoys these automatic updates without having to do anything manually or spend an extra penny. This section focuses on some of the most recent exciting updates to the system.

### CSV/Excel Export Filtering from Products

Exporting product lists to CSV/Excel is easier and more accurate than ever with advanced filtering options. This is a great addition for businesses that work with third-party fulfillment companies and apps. With this new product export functionality, you can provide all of the information needed for product lists so that customers can accurately order from all sales channels.

As online ordering for all types of retail becomes more and more popular, this feature will help clients partner with companies like Grubhub, Drizly, Instacart, and more.

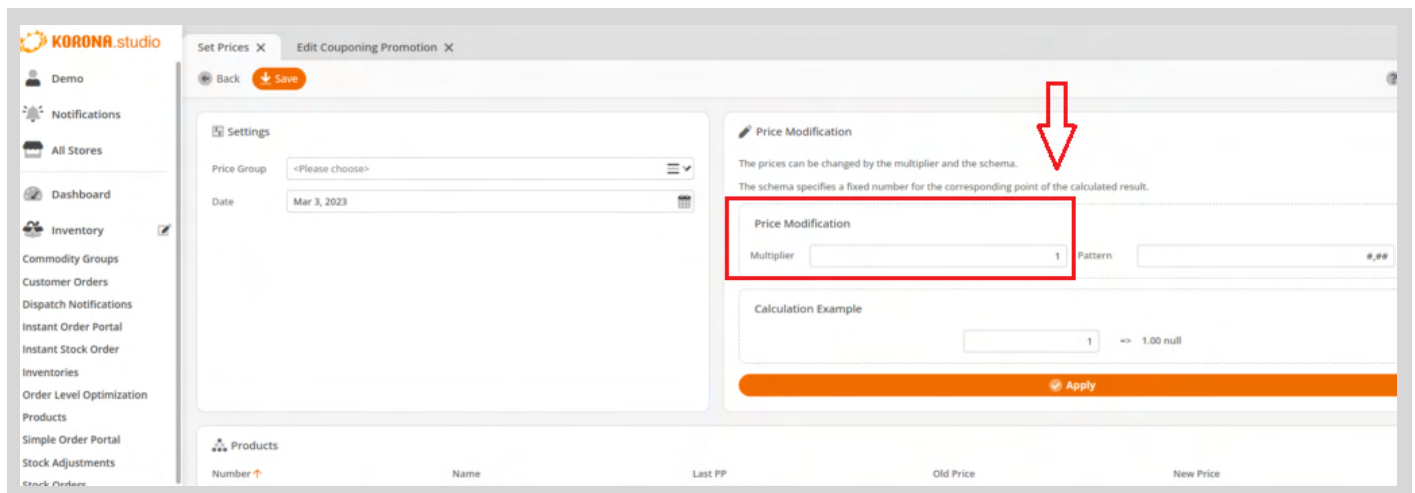

The screenshot shows the KORONA Studio interface. On the left is a navigation sidebar with categories like Demo, Notifications, All Stores, Dashboard, Inventory, Commodity Groups, Customer Orders, Dispatch Notifications, Instant Order Portal, Inventories, Order Level Optimization, Products, Simple Order Portal, Stock Adjustments, Stock Orders, Stock Receipts, Stock Returns, Store Orders, Suppliers, Warehouse, Hospitality, and Ticketing. The main area is titled 'Products' and has a 'More' dropdown menu open. The menu items include: Set Prices, Price Labels, Shelf Labels, Product Description Labels, **CSV Export** (highlighted with a red box), **XLSX Export** (highlighted with a red box), Product Code Recommendations, ABC Analysis, Product / Customer, Volume Report, Top Seller Report, Top Seller (Org Avg.), Slow Seller, Slow Seller (Org Avg.), Most Popular, and Top Seller Statistic. Below the menu is a table of products with columns for Commodity Group, Sector, Assortment, Track Inventory, and Active. The table contains several rows of product data.

Number	Commodity Group	Sector	Assortment	Track Inventory	Active
00	Misc.	Alcohol	moved	✓	✓
03	Misc.	Alcohol	moved	✓	✓
06	Misc.	Alcohol	moved	✓	✓

100	Retail	General	General Assortment	✓	✓
B69	Alcohol	Alcohol	Assortment	✗	✓
0000	Cheese & Charcuterie Boards	General	General Assortment	✗	✓

## Retail Price Percent Adjustment Option

With inflation affecting so many different retail verticals, many business owners prefer to raise their prices by a simple percentage margin. Accordingly, we added a function to allow business owners to increase or decrease it by a percentage point.

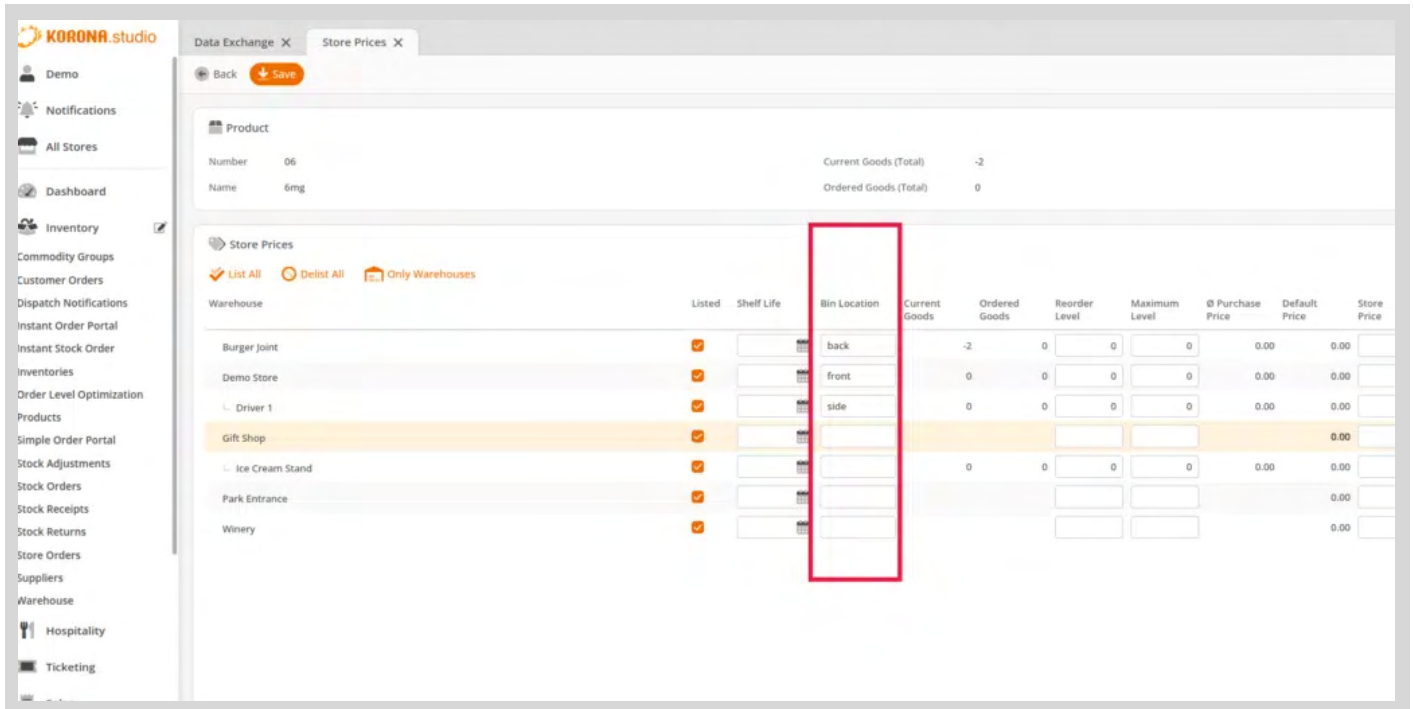

In other words, instead of having to take the extra step of doing manual calculations for each product, retail operators can now just enter the percentage amount they wish to increase right on the Studio interface. In one click, it will adjust the prices for the selected items so retailers can review and/or apply the increases in real time.

## Bin Location Section

There is now an additional text field to the product inventory management page to make it easier for retailers to find items in their storage areas.

On the same line where operators can input their 'Reorder Levels' and 'Maximum Levels', they can also add a bin location name, number, or letter so that employees can see exactly where specific items are kept in storage. This helps retailers immensely in organizing a master list of storage locations for all products.

The screenshot shows the 'Store Prices' configuration page in KORONA POS. The product details are: Number 06, Name 6mg, Current Goods (Total) -2, and Ordered Goods (Total) 0. The table below lists prices for various warehouses and bin locations. A red box highlights the 'Bin Location' column.

Warehouse	Listed	Shelf Life	Bin Location	Current Goods	Ordered Goods	Reorder Level	Maximum Level	Ø Purchase Price	Default Price	Store Price
Burger Joint	<input checked="" type="checkbox"/>		back	-2	0	<input type="text" value="0"/>	<input type="text" value="0"/>	<input type="text" value="0.00"/>	<input type="text" value="0.00"/>	<input type="text" value="0.00"/>
Demo Store	<input checked="" type="checkbox"/>		front	0	0	<input type="text" value="0"/>	<input type="text" value="0"/>	<input type="text" value="0.00"/>	<input type="text" value="0.00"/>	<input type="text" value="0.00"/>
Driver 1	<input checked="" type="checkbox"/>		side	0	0	<input type="text" value="0"/>	<input type="text" value="0"/>	<input type="text" value="0.00"/>	<input type="text" value="0.00"/>	<input type="text" value="0.00"/>
Gift Shop	<input checked="" type="checkbox"/>					<input type="text" value=""/>	<input type="text" value=""/>	<input type="text" value="0.00"/>	<input type="text" value="0.00"/>	<input type="text" value="0.00"/>
Ice Cream Stand	<input checked="" type="checkbox"/>			0	0	<input type="text" value="0"/>	<input type="text" value="0"/>	<input type="text" value="0.00"/>	<input type="text" value="0.00"/>	<input type="text" value="0.00"/>
Park Entrance	<input checked="" type="checkbox"/>					<input type="text" value=""/>	<input type="text" value=""/>	<input type="text" value="0.00"/>	<input type="text" value="0.00"/>	<input type="text" value="0.00"/>
Winery	<input checked="" type="checkbox"/>					<input type="text" value=""/>	<input type="text" value=""/>	<input type="text" value="0.00"/>	<input type="text" value="0.00"/>	<input type="text" value="0.00"/>

## Conclusion

At KORONA POS, we are dedicated to problem-solving and optimizing in order to provide our clientele with the best tools possible. And we gladly take feedback. Please let us know if you have any requests for more information, features, or correspondence. You may well see your request on a future version of the software.

In the meantime, reach out to us by phone at 833.200.0213 or at [inquiries@combase-usa.com](mailto:inquiries@combase-usa.com) if you have any questions or to set up a demo.
